## WinCCGURU's Complete Programming Course for WinCC SCADA Engineers

Section 1 Class Resources:

Notes:

1. If you already have WinCC SCADA 7.4 or higher installed, **you can skip this step**; this course is compatible with those versions, however WinCC V8 has a different UI than earlier versions, so some interfaces will look different.
2. If you do use the WinCC V8 Trial Version, it will allow you to use the software for 21 days after first creating a WinCC project. Afterwards you will need a license! So, please be sure you can complete the course before this happens, or that you will have access to a WinCC V8 Licensed installation. Here is the URL for Downloading the trial version of Siemens SIMATIC WinCC V8:  
<https://support.industry.siemens.com/cs/document/109822105/wincc-v8-0-trial-version>
3. After downloading the 4 WinCC V8 files, run the **WinCC\_V8\_0.exe** file to extract the Siemens WinCC Installation program. Note the path where the files are extracted so you can easily find them after this step. This is usually at: **C:\Users\\AppData\Local\Temp\WinCC\_V8\_0\**
4. After the files are extracted, open the path in file explorer and execute the **setup.exe** file to begin WinCC Installation. You will need Windows Administrator level access to perform this step. Follow the prompts and wait for the installation to complete.
5. After you install WinCC, please make sure you install the latest updates, as shown in the video. Simens WinCC Updates are cumulative, and so you wont need to download all of them, only the latest one. Here is the link for WinCC V8 Updates:  
<https://support.industry.siemens.com/cs/document/109818723/updates-for-wincc-v8-0-and-wincc-v8-0-asia>
