

# Stringstreams

## Exercises

- Write a program using stringstream that
  - Opens a file containing the following data
  - Reads the data and stores it in a vector
  - Prints out all the elements of the vector

23 45 6 1 8

19 27 46 33 99 12

6 79

48 34 68 73

- Still using stringstream, alter your program so that it stores the numbers in a string, instead of a vector
