

The Exception Mechanism Exercises

- Explain what happens when an answer is thrown. Your answer should cover
 - What happens to the thrown instance
 - What happens to the local variables in the try block
 - What happens to the program control flow

- Explain what is meant by the term "stack unwinding" (if you didn't already cover it in your previous answer)

- A catch block can throw its exception instance again. What is the syntax for doing this?
- What happens to the exception instance?
- Give an example where this would be useful
