

# Removing Algorithms Continued Exercises

# remove\_if()

- Describe the remove\_if algorithm function
- What arguments does remove\_if() take?
- Write a simple program which uses remove\_if()

# remove\_copy()

- Describe the remove\_copy algorithm function
- What arguments does remove\_copy() take?
- Write a simple program which uses remove\_copy()

# remove\_copy\_if()

- Describe the remove\_copy\_if algorithm function
- What arguments does remove\_copy\_if() take?
- Write a simple program which uses remove\_copy\_if()

# unique()

- Describe the unique() algorithm function
- What arguments does unique() take?
- Write a simple program which uses unique()

# unique() with Predicate

- Modify your solution so that the unique() call takes a predicate argument

# unique\_copy()

- Describe the unique\_copy algorithm function
- What arguments does unique\_copy() take?
- Write a simple program which uses unique\_copy()
