

String Literals Exercises

String literals

- Write a program that creates an `std::string` literal and prints it out
- Demonstrate that `std::string` operations can be performed on an `std::string` literal

Raw String Literals

- Without adding any extra backslashes, create a string variable which contains the following characters:
`C:\Program Files\\n`
- Write a program which prints out the string's data. Check that it is displayed correctly
- Repeat this with the following characters:
`C:\Program Files (x86)\\n`
